

Page 5 - Accessible PDF Example

GENERAL CONTENT

- Welcome to the last .pdf page of my website. I am here today to show you what makes a good accessible .pdf file.
- I like to use bullet points to make my points stick out from each other, as well as making the page look much more organized.
- This allows me to make a better looking article as well, since everything is broken up into different sections.

- Above is a totally heroic-looking picture of me at Tanner's for an example of having images be a useful part of accessible .pdfs.
- I have been very busy working on all of my ICC assignments, and I can't wait for Winter Break!

- I have tested some of my previous .pdfs with screen readers like NVDA, so they should be accessible.
- Most of this content is for testing purposes to see if this would work with screen readers.
- Another .pdf I have created that you can test will be linked right here: [Breakout: The Red Vs. Blue Wars Instruction Manual \(International\)](#) (I created this for a Breakout-styled game in one of my other classes, and I figured that this could be another good example to use for accessibility testing. Happy hunting!)

Here is some Quick Navigation for if you want to view my other labs:
